Obsolete Cylinder Removal Event

Obsolete cylinders are a safety concern and unnecessarily take up valuable space in your work area. REHS is providing an opportunity to have these cylinders removed from your location at no cost. This event will take place during the months of March and April with the following details:

- All types of cylinders will be included, (i.e. large cylinders, lecture bottles, propane tanks, etc.)
- All cylinders should be in good condition, not leaking, have protective caps or plugs (where applicable)
- All cylinders should be labeled with the chemical constituents
- If you have a cylinder with unknown contents please email Steve Etzold of REHS at setzold@rehs.rutgers.edu

Please follow this process to have unwanted or obsolete cylinders removed from your location:

1. Check the cylinders in your possession to determine if they are still being used to support your activities or if they are no longer needed.
2. Contact the cylinder supplier (see vendor contacts below) to determine if they will take back your unwanted cylinders.
3. For cylinders which the supplier is unknown or the supplier is unwilling to take it back, please email Steve Etzold of REHS at setzold@rehs.rutgers.edu for removal, before April 30th 2008.

Cylinder Vendor Contacts:

Note: Please contact REHS prior to returning your cylinder if your cylinder supplier is requiring you to complete the shipping documents, packaging and/or container labeling for the return shipment.
